

NEW FREEDOM

Problem

Lack of effective moderation solutions for Web3

Web3 Online games and Metaverse
Decentralized Social Media
NFT Marketplaces
Decentralized Exchanges (DEX)

Popular **existing solutions** and why they don't actually work?

Centralized moderation

Simply makes no sense on decentralized system

Self-moderation

Extremely slow reaction time and low precision

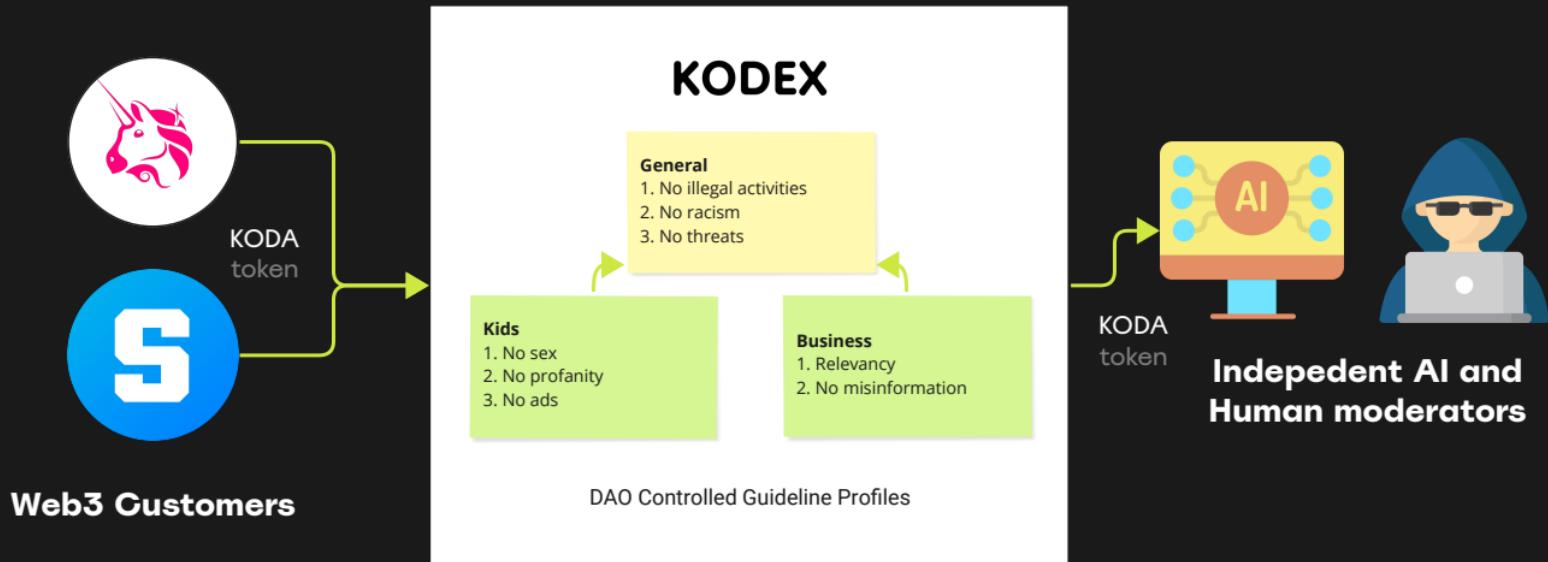

Custom solution

Expensive, vulnerable to hacker attacks

Solution

Kodex - Integratable decentralized AI-Human moderation protocol and DAO

Web3 content, gaming, and communities are quickly **gaining traction**

Why Now?

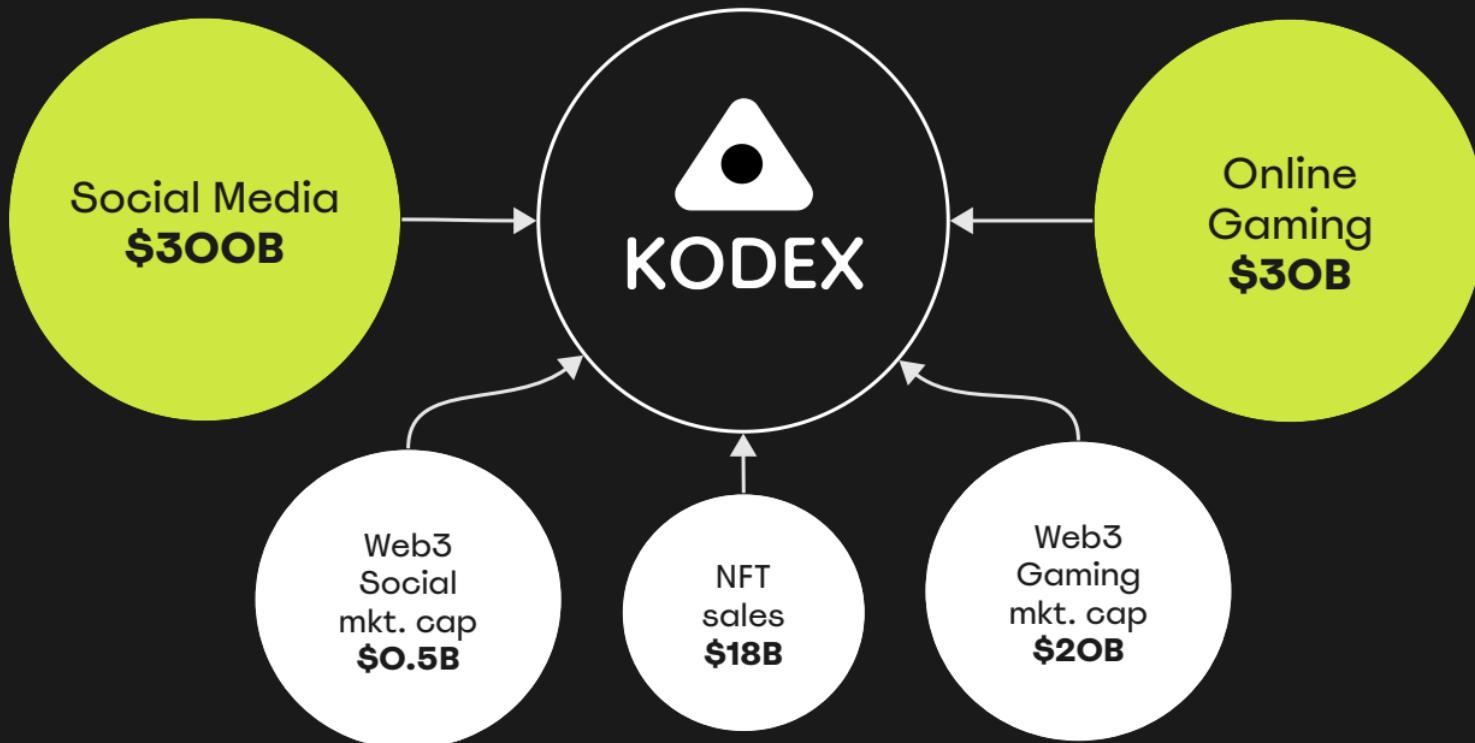

Most Web3 products will face **growth pains** with the user surge

Escalating tension surrounding moderation decisions on major platforms like X, Facebook, and YouTube

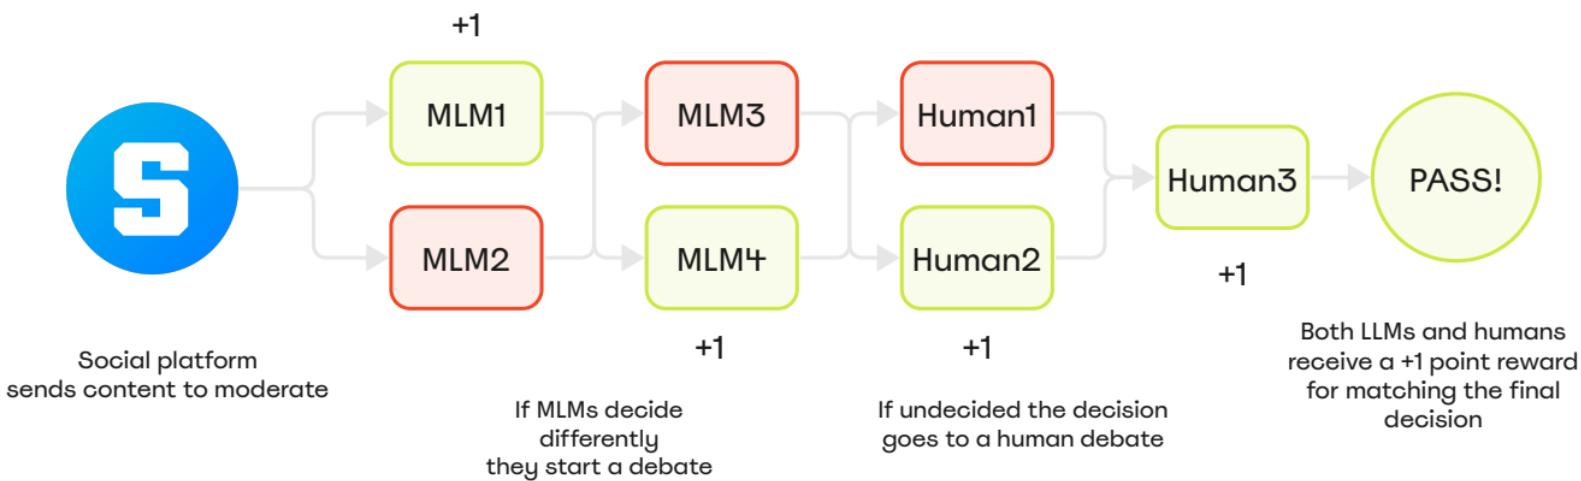

Increasing incidents of illegal and inappropriate online communications in games targeted at children

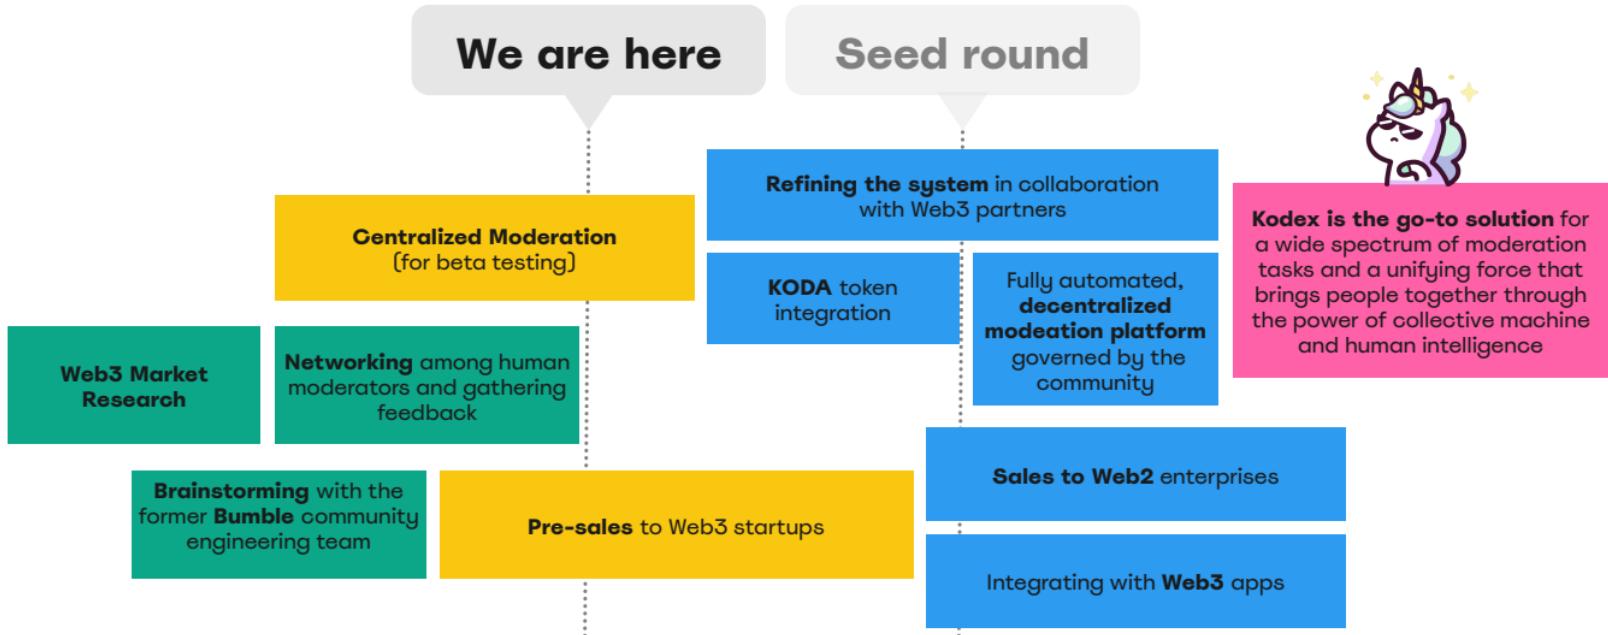

Product: Mechanics and Tokenomics

- 3rd Party AI and Human moderators compete on-chain for content to moderate
- KODA token is utilized for governance and payments to 3rd party AI and Human moderators
- Human moderators are invite-only and each moderator receives 10% from those they invite

Product Development: Roadmap

Done

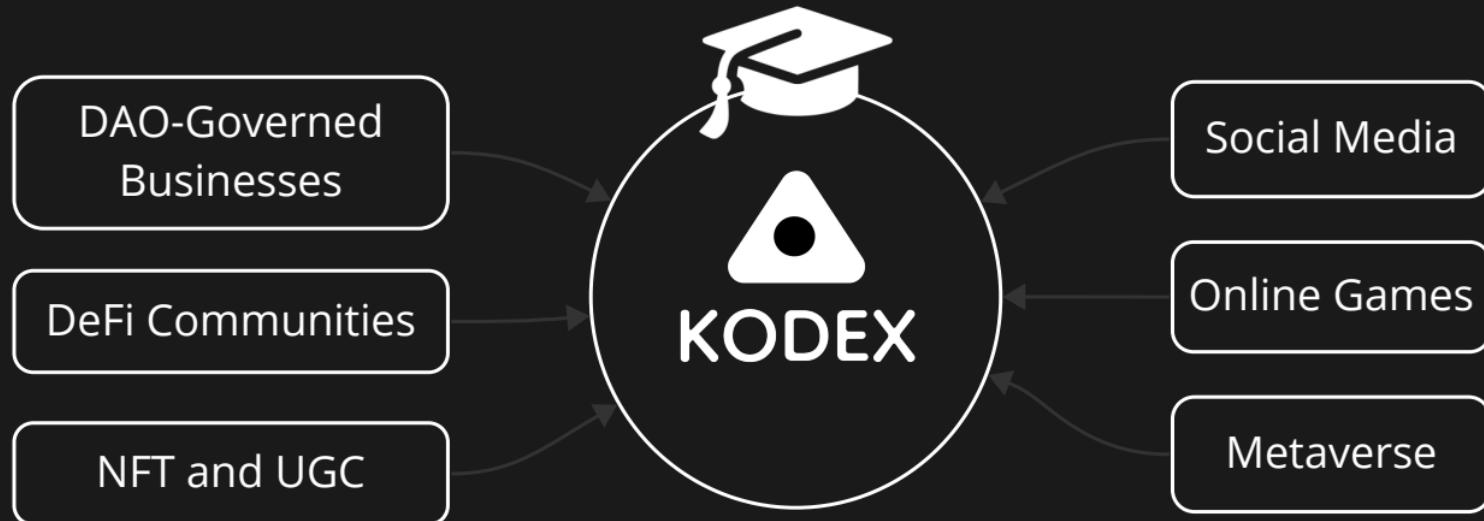

In Progress

Planned

Dreamed

Product: Vision

Kodex is the singular secure source of **law and order** in the future decentralized Web3 world
