Why Kodex?

1. Key safety solution resolving critical pain points in the three strongest tech trends

Web3   Generative AI   VR/Gaming
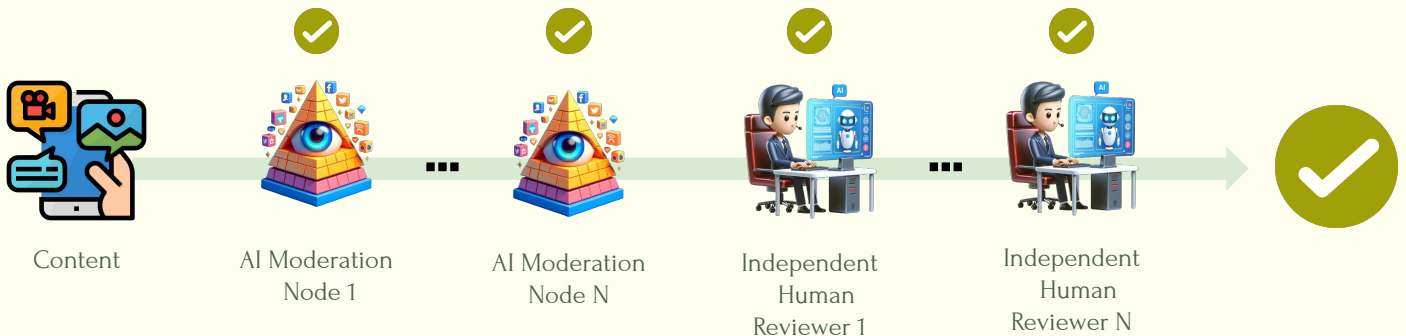

2. The only reliable moderation solution that's truly decentralized

Content → AI Moderation Node 1 → ... → AI Moderation Node N → Independent Human Reviewer 1 → ... → Independent Human Reviewer N → ✓

3 Enterprise level privacy and security

Public Node
Most affordable. Processes public anonymized data, e.g., social media posts, comments, online game data.
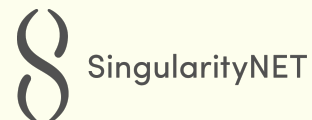

Private Node
Simplest path to privacy. Data is processed in TEE, e.g., personal messages, generative AI.

Sensitive Data Node
Sensitive data never leaves corporate servers or clouds, e.g., internal chat rooms and communities.

4. The approach has been rigorously tested through years of trial and error with millions of Bumble users.

bumble   Google   SingularityNET

Core team includes veterans who developed and operated a similar system at Bumble for years, including the head of engineering, AI lead, and a founding team member. The team is further strengthened by engineers from Google and Singularity.NET.

5. Project Status

MVP
- Several custom LLMs and RNN classifiers
- Audio and text moderation
- Fully functional human moderation and customer front-ends

Sales
- Sales lead with 8+ years of experience in digital safety and a network of 70+ potential customer companies
- Initial interest from several Web3 projects in social, gaming, and healthcare

Community
- Invite-only union of 250+ AI and Web3 experts passionate about the project.
